

Golfer (45) Sacramento — “My back-swing and follow-through feels more fluid now that I have my range of motion back. It returned after just two procedures.” (right)

Left: Impaired trunk flexion, characteristic of the SacroCoccygeal Syndrome.

Student (18) Denver — “I can ride my bike, swim and dance now that the terrible pain and stiffness is gone.” (right)

Left: Opioids no longer controlled bilateral sciatica.

Whether performing activities of daily living or delivering a baby, a flexible coccyx is an integral part of pelvic function. Fortunately, this young woman was diagnosed and treated before becoming pregnant.

Retiree (60) Evanston — “Every movement was painful. I didn’t want to exercise. I was told it was degenerative arthritis of my hips.” (left)

Right: Once coccyx motion was restored spine and hip socket range increased impressively in just 5 days with 3 procedures. Post procedure exercise was prescribed.

Ap Salesman (30) Madrid — “My friend from Tel Aviv insisted I have my coccyx tested. Now I am a new man. I have no lumbago or stiffness now.” (right)

Right: Each procedure improved lumbar flexion and SLR by 20 degrees, for a total increase in spine flexion of 60 degrees in 10 days.
